

Weight loss success story

Management of Weight, Excessive bloating & Depression

I reside in Canada as a housewife. I wanted to lose some weight and that is why I was looking for a dietician. One of my friends shared with me the contact number of Dietician Priyanka, whose father in law recently lost around 10 Kg. I made a call to her and immediately connected with Dietician Priyanka.

I revealed my health problems and mental state to her. I was overweight, had excessive bloating and was mentally very stressed. I have been living in Canada for many years. She said that the root cause of all my health problems is my intestinal health.

When you travel overseas your gut bacteria changes due to changes in weather & climate, and this is one of the main reasons of digestive complaints in people who travel overseas. As your gut bacteria changes, your mood drops and you start feeling stressed (GUT-BRAIN axis).

The gut brain axis consists of continuous communication between your intestinal bacteria and your nervous system. That is why, if your intestine has healthy bacteria, you will feel healthy and if your intestine has bad bacteria you will feel bad and depressed.

I shared my daily routine and eating habits with her as well. After reviewing my blood test report, she calculated my muscle mass and fat percentage. She told me that I need a diet rich in protein, fibre, antioxidants and omega 3. Within 24 hours, I received my first

plan. The plan was easy to adjust to my daily routine. All the food items mentioned in the plan were locally available.

Week by week my digestion was getting better and I could feel an improvement in my mood. My stress level was decreasing. She also suggested me to take ashwagandha and chamomile green tea for stress, that really helped.

Within 10 weeks I was able to lose around 9 Kg. I will definitely continue the plan as my goal is to lose 10 more kg. Thank you, priyanka, for your guidance and motivation.
