

How Barkha lost 10Kg in 3 months?

I tried a lot to lose weight – followed crash diet and joined gym also where I was doing approximately 2 hours of workout daily.

Due to this, I became very weak. Surprisingly, even after such a heavy workout, I could not lose even an inch. Then one of my friend shared Dietitian Priyanka's number with me. I called her and shared all my health history. She told me that I have hormonal problem and that is why I am unable to lose weight even with such a heavy workout plan.

She immediately calculated my fat percentage and muscle mass. She told me that due to workouts my muscle mass is very low. That is why she told me to stop those heavy workouts and suggested yoga.

She planned a protein-rich anti-inflammatory diet for me and told me to share pics of all my meals and weight regularly. She told me that I don't need to count my calories in order to lose weight, but need to choose healthy food items.

An anti-inflammatory diet includes food items that help to reduce chronic inflammation that otherwise might increase the risk of lifestyle diseases like diabetes, PCOS and heart disease.

With her regular follow-up and close monitoring, not only could I lose 10 kilos, but now my periods are also regular. I also had problem of severe headache. Because of that, she gave me some

*omega 3 supplements, and now I am feeling so slim! so healthy!
and so beautiful!*

*Diet really matters a lot. If you are looking for a healthy weight
loss and if you have medical problem then you should definitely
take the help of a dietitian.*
