

How Sakshi reduced her blood sugar from 350 to 125

I am Pooja. My age is 45 years & my weight is 95 Kg. In spite of the fact that I was taking 1000mg of metformin twice a day, my blood sugar used to be very high (more than 300). My doctor suggested me that further increasing the dosage of medicine is not a good idea. So, he referred me to Dietician Priyanka.

I checked her website, www.biteanddiet.in, reviews & finally made a call to her. She picked the call immediately and asked me my requirement. I told her that I want to reduce my blood sugar and weight both. She told me that all my health parameters would be fine if I will make certain changes in my diet and lifestyle.

She calculated my BMR, body fat percentage, muscle mass and shared with me the plan. I was advised to walk for 30–45 minutes daily, sleep on time and have early dinner. So, I started having my dinner at 5PM only and walked for about 45 minutes. I followed the plan as it is with full dedication and within one month lost around 10Kg.

I was shocked!

So I called Dietician Priyanka and asked her, "Is losing so much weight healthy"? She told me that most of us who have an enlarged liver or inflamed liver have excess weight due to water retention. High doses of medicine can damage our liver and other vital organs. The anti-inflammatory detox diet helped my body to flush out those toxins and excess water. That is why I have lost so much weight. My healthy weight loss is 2Kg per month only. I was convinced and continued the plan.

After anti-inflammatory detox diet, I was given high fat, high fiber diet. This diet helped me to reduce my blood sugar and body weight both. Within two months, my stress level reduced a lot, my energy level improved, and my blood sugar level used to be below 150 now. I stopped taking metformin in the evening and reduced my morning dose to 500mg only.

I was experiencing lots of side effects of medicine and that is why I am very thankful to Dietician Priyanka, as she helped me to reduce the dose. My 3 months are now over, but I want to continue the plan to lose 10 more kg.

I wish that If had made these changes in my diet and lifestyle when I was prediabetic, I would not have never depended on medicine.
