

How Rishi Shukla managed to reduce Post Covid Joint pain?

Management of Weight, Inflammed liver & Joint pain

I am Rishi Shukla, age 35 years, slightly overweight. I have experienced two episodes of corona. One day had excruciating joint pain that prevented me from even being able to walk. I was treated at AIMS after being admitted, but I was quickly released as nothing was working. My sister then gave me Dietician Priyanka's phone number. She assured me that she is a reputable dietitian and that she will assist me.

I spoke with her and told her everything I was worried about. She went through each of my reports. She informed me that my liver has become inflammed, maybe as a result of the medication's negative effects. She promptly put me on an anti-inflammatory diet for about a week, and to my astonishment, I shed about 4 kg of weight and no longer had any joint pain.

I shed about 6 kg by sticking to the anti-inflammatory diet for 3 more weeks. I managed to shed about 10 kg in just two months. My belly size reduced significantly, and I now felt lighter and more energized.

I am really thankful to dietician Priyanka; if one follows her food plan diligently, it works miracles.
